## CAREER OBJECTIVE

Aspiring Software Engineer (Backend Developer) with an MCA and hands-on experience building end-to-end web applications using Python, Flask, and SQL (MySQL, SQLite). Skilled in backend logic, database design, RESTful application development, and Git-based version control, with a demonstrated ability to design test cases and validate data integrity across full-stack projects. Seeking a Software Engineer / Backend Developer role in Hyderabad or Bengaluru to apply strong programming and problem-solving skills toward building scalable, reliable, and high-quality software solutions.

## EDUCATION

|                                                                                                                                   |                    |

| <b>Federated Learning for 6G Networks</b><br>Python, Flask, MySQL <ul style="list-style-type: none"><li>Developed a federated learning-based system for 6G networks enabling decentralized model training without sharing raw data.</li><li>Built a Flask web application supporting dataset upload, model selection (RF, CNN, MLP, XGBoost), and real-time prediction.</li><li>Improved data privacy and reduced latency by simulating federated learning with local training and global model aggregation.</li><li>Designed test cases to validate model outputs across RF, CNN, MLP, and XGBoost by comparing predicted vs. expected results during local training and aggregation testing.</li><li>Verified dataset upload functionality through boundary and format checks to confirm data integrity before model execution.</li></ul> | <b>Dec 2025</b> |
| <b>Luxury Hotel Management System</b><br>Flask, Python, SQLite, Bootstrap <ul style="list-style-type: none"><li>Developed a comprehensive hotel management platform with a room booking system, overlap protection, and an admin dashboard.</li><li>Implemented user authentication, automated email notifications for booking approvals, and a dynamic image gallery.</li><li>Integrated a post-booking food ordering menu for guests, utilizing SQLite for structured data management.</li><li>Wrote and executed test cases for the room booking module, covering overlap protection logic and edge-case scenarios, and logged actual vs. expected outcomes.</li><li>Performed database validation by writing and running test queries against SQLite to verify data integrity across booking, user, and menu tables.</li></ul>          | <b>Nov 2025</b> |

## TECHNICAL SKILLS

Languages: Python, SQL  
Frameworks & Libraries: Flask  
Databases: MySQL, SQLite  
Tools & Platforms: Git, GitHub, VS Code

## CERTIFICATIONS

Python Programming – Codegnan

## ACHIEVEMENTS

Hackathon Participant – RGM College (2025)  
Self-driven in writing test cases and documenting defects/outcomes across personal Python projects, ahead of formal exposure to test management tools.

## LANGUAGES

English, Telugu
